Sriram Ganapathy, IISc Bengaluru
Deepu Vijayasanen, NITK Surathkal
Shikha Baghel, IISc Bengaluru

In multilingual communities, the social interactions involve frequent use of multiple languages mixed in with their native language as well as other known languages. This imposes challenges to the various state-of-the-art speech based system.

Does the presence of multilingual speech, where the same speaker speaks in multiple languages, imposes challenges to the current speaker diarization systems ?

Are the existing language diarization models equipped to deal with multi-speaker scenarios ?

These questions are the spark behind DISPLACE Challenge which is designed to find scientific insight and engineering solutions in the field of speaker diarization and language diarization.

The DISPLACE Challenge provides access to a multilingual informal conversational speech dataset gathered from speakers who are fluent in major Indian languages and English (Indian accent).

The selected submissions will be presented in a **special session** at **Interspeech-2023**, the flagship conference of the global speech science and technology community, to be held in Dublin, Ireland during 20th -24th August, 2023.
