Sriram Ganapathy, IISc Bengaluru
Deepu Vijayasenan, NITK Surathkal
Shikha Baghel, IISc Bengaluru

In multilingual communities, social interactions involve frequent use of multiple languages mixed in with their native language as well as other known languages. Such scenarios are highly challenging to the various state-of-the-art speech-based systems.

Does the presence of multilingual speech, where the same speaker speaks in multiple languages, imposes challenges to the current speaker diarization systems?

Are the existing language diarization models equipped to deal with multi-speaker scenarios?

These questions are the spark behind DISPLACE Challenge, which is designed to find scientific insight and engineering solutions in the field of speaker diarization and language diarization.

The DISPLACE Challenge provides access to a multi-lingual informal conversational speech dataset gathered from speakers who are fluent in major Indian languages and English (Indian accent).

The selected submissions will be presented in a **special session** at **Interspeech-2023**, the flagship conference of the global speech science and technology community, to be held in Dublin, Ireland, during 20th -24th August 2023.

Come forward & DISPLACE the current methods with your findings!
